

Human Wharton's jelly mesenchymal stem cells inhibit cytokine storm in acute respiratory distress syndrome in a rat model

Running title: Inhibitory effect of human Wharton's jelly mesenchymal stem cells on cytokine storm in acute respiratory distress syndrome

Wahyu Widowati^{1✉}, Teresa Liliana Wargasetia¹, Fanny Rahardja¹, Rimonta F Gunanegara¹, Didik Priyandoko², Marisca Evalina Gondokesumo³, Ervi Afifah⁴, Cahyaning Riski Wijayanti⁴, Rizal Rizal^{4,5}

Department(s) and institution(s)

¹Faculty of Medicine, Maranatha Christian University, Jl. Surya Sumantri no 65, Bandung 40164, Indonesia

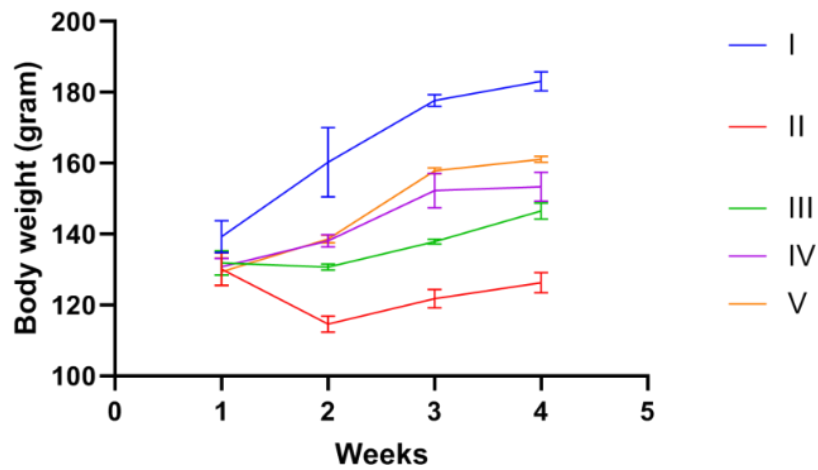

²Faculty of Mathematic and Natural Science Education, Indonesia University of Education, Jl. Dr. Setiabudi no 229, Bandung 40154, Indonesia

³Faculty of Pharmacy, University of Surabaya, Jl. Raya Kalirungkut, Surabaya 60286, Indonesia

⁴Biomolecular and Biomedical Research Center, Aretha Medika Utama, Jl. Babakan Jeruk 2 no 9, Bandung 40163, Indonesia

⁵Biomedical Engineering, Department of Electrical Engineering, Faculty of Engineering, Universitas Indonesia, Jl. Margonda Raya, Depok 1642, Indonesia

Supplementary Figure 1. Effect of various doses of hWJMSCs on body weight in the ARDS rat model. Data are presented as mean±SD of pentaplicates: I: negative control (normal rat); II: positive control (LPS-induced rat); III: positive control + hWJMSCs 5×10^4 cells/kg BW; IV: positive control + hWJMSCs 5×10^5 cells/kg BW; and V: positive control + hWJMSCs 5×10^6 cells/kg BW.
